

The freedom of a complete reporting solution in Open Office Calc, without the Excel limitations

Query and analyze data intuitively in real time in Open Calc without programming

Improve understanding and use of your database for relevant reporting in real time

StarQuery for Calc allows querying all relational databases and obtaining results in real time in Open Calc without purchasing licenses for a spreadsheet software. You will benefit from Open Calc's graphical formatting features, but also from StarQuery's multidimensional data analysis interface which allows navigating through your data to the required level of detail.

Report distribution in familiar formats (Open Office ...) via email, fax or FTP is also more efficient and intuitive.

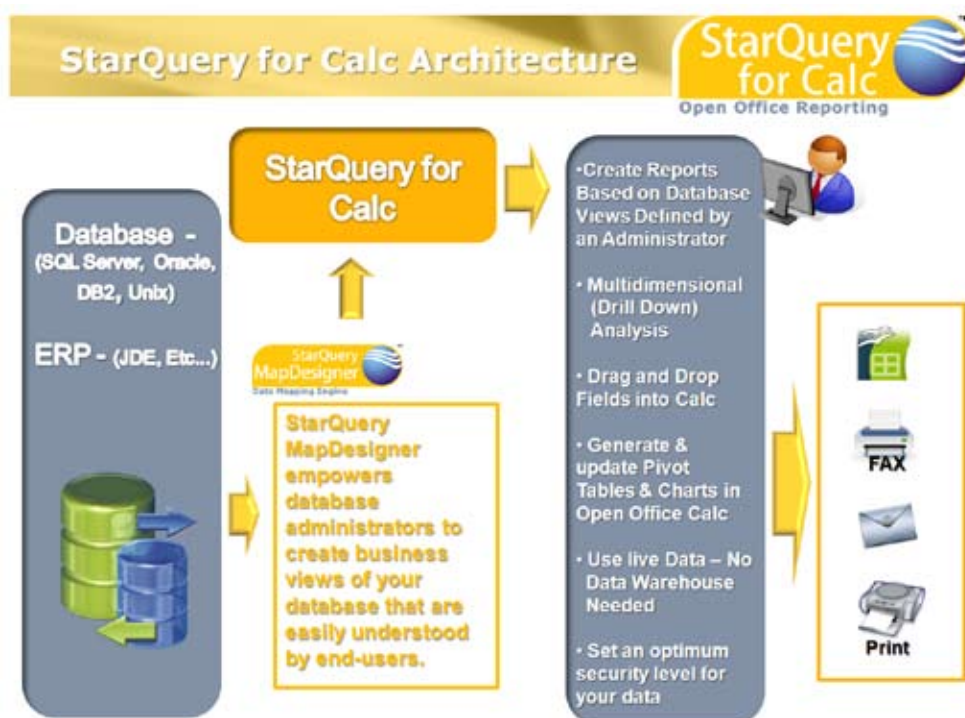

Intuitive, secure and powerful

StarQuery for Calc users can work on an easy to understand business view of the database created through StarQuery MapDesigner, without compromising on overall data security.

With StarQuery for Calc, integrated into Open Calc, end users can easily create "On-demand" custom reports to make sound business decisions.

Benefits of reporting with StarQuery for Calc

- Creation of data pilots directly in Open Calc
- Facilitates good data analysis
- Visualization of JDE data in an understandable format
- Automatically formatted reports from the StarQuery for Calc's intuitive interface
- No programming knowledge required

System Requirements

Hardware Configuration

Processor	Min : 1 GHz, recommended : >=2.0 Ghz
Memory Configuration	Min. 512 Mo, recommended >=1GB
Hard Disk space	Min : 1 Go, > recommended >=30GB

Software Configuration

Operating System	Windows XP/2003/VISTA/Windows 7 Windows Installer 3.1 et MDAC 2.8
Databases:	Microsoft OLE DB Provider for Jet & SQL Server Oracle Provider for OLE DB 9i and 8i IBM Informix Connect Sybase SQL Anywhere ... and much more
Other tools	Open Office Calc version 3.0 or higher Acrobat Reader 5 or higher Internet Explorer 5.01 or higher
Sender option by e-mail	MS Outlook 2000/XP/2003/2007 connected at Exchange Server 5.0/5.5/2000/2003 Lotus Note 6/7/8 connected at Domino 6/7/8

Note: To use an ODBC driver, select **Microsoft OLE DB Provider for ODBC Drivers** then select the data source in the **Connection** tab.

Symtrax

Symtrax is a worldwide organization which produces and distributes multiplatform reporting and output management software.

With user friendliness at the forefront, Symtrax software will help create professional reports for better analysis and effective decision making.

StarQuery Suite

StarQuery empowers end users to build customized reports directly from Open Calc. StarQuery leverages your company's database expert allowing them to create a view of your database that contains recognizable field names and is limited to just the fields needed. End-users use the views to create and execute queries from within Open Calc as needed or queries can be pre-built and run anytime with just one click. Advanced users can take advantage of StarQuery's ability to drill down within a query and see multidimensional real-time views of their data.
