

The Complete ERP Reporting Solution for JD Edwards

Import and Analyze your Data Directly into Excel for Real-Time Analysis Without Programming Knowledge

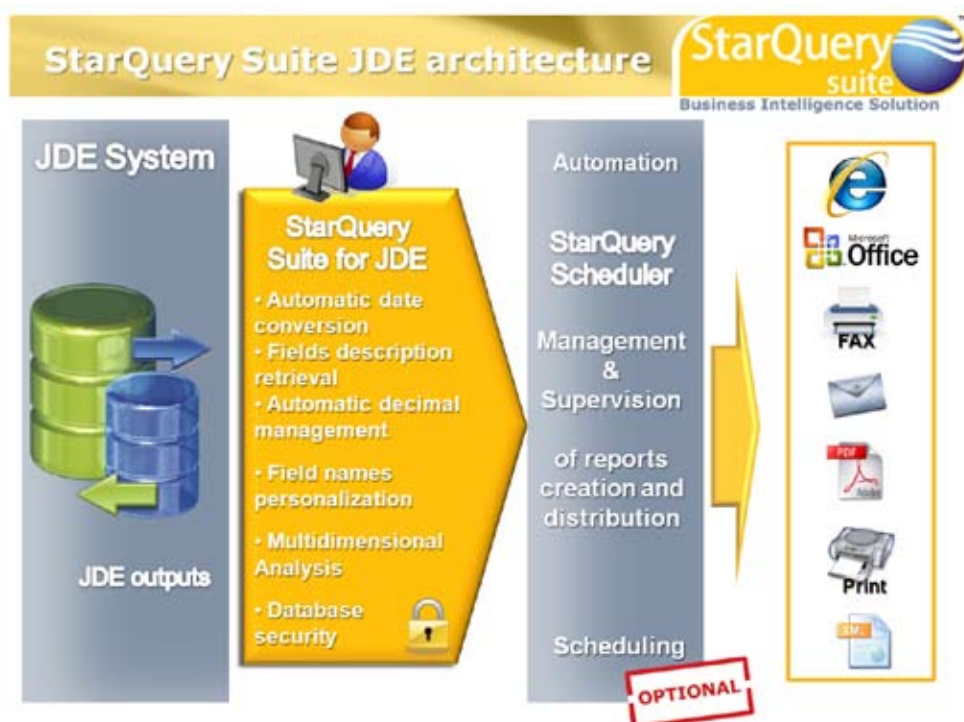

StarQuery for JDE is an ad hoc querying tool that automatically adjusts for JDE Database quirks enabling end-users to create meaningful queries directly with Excel.

StarQuery for JDE offers users an intuitive view of their database by automatically correcting issues related to dates and decimals and augmenting field names with descriptions from the JDE data dictionary. End users can further tweak the view by renaming data fields as needed. A short learning curve and quick ROI is ensured through a tight integration with Microsoft Excel and automation of delivery and publication via email or the web.

StarQuery for JDE requires no modification to your infrastructure or ERP

Create JDE Reports immediately, without modifying your infrastructure, while maintaining the security of your database through selective user access to sensitive information. Connection to the JDE database is in real-time, and facilitates multidimensional analyses (cube), through data buffering.

- ### Benefits of reporting in JD Edwards database
- No JDE programming required
 - Recognizable field and table names enhance analysis
 - Complete automation enabling hands off emailing and publishing
 - Tight and seamless Excel Integration
 - Output delivered and published in Excel, PDF, HTML, or XML

System Requirements

Hardware Configuration

Processor	Min : 1 GHz, recommended : >=2.0 Ghz
Memory Configuration	Min. 512 Mo, recommended >=1GB
Hard Disk	Min : 60 Mo, > recommended >=30GB

Software Configuration

Operating System	Windows 2000/XP/2003/VISTA Windows 2000 with Service Pack 4 and Windows Installer 3.1 et MDAC 2.8
Databases:	Microsoft OLE DB Provider for Jet & SQL Server Oracle Provider for OLE DB 9i and 8i IBM Informix Connect Sybase SQL Anywhere ... and much more
Other tools	Microsoft Office 2000/XP/2003/2007 Acrobat Reader 5 or higher Internet Explorer 5.01 or higher
Sender option by e-mail	MS Outlook 2000/XP/2003/2007 connected at Exchange Server 5.0/5.5/2000/2003 Lotus Note 6/7/8 connected at Domino 6/7/8

Note: To use an ODBC driver, select **Microsoft OLE DB Provider for ODBC Drivers** then select the data source in the **Connection** tab.

Symtrax

Symtrax is a worldwide organization which produces and distributes multiplatform reporting and output management software. With user friendliness at the forefront, Symtrax software will help create professional reports for better analysis and effective decision making.

StarQuery Suite

StarQuery empowers end users to build customized reports directly from Excel. StarQuery leverages your company's database expert allowing them to create a view of your database that contains recognizable field names and is limited to just the fields needed. End-users use the views to create and execute queries from within Excel as needed or queries can be pre-built and run anytime with just one click. Advanced users can take advantage of StarQuery's ability to drill down within a query and see multidimensional real-time views of their data.
