

The complete Output Management Suite for SAP spool requests

Create, print and export professional looking reports for further analysis and distribution

Compleo Suite is an SAP certified Output Management solution that improves productivity and efficiency by capitalizing on spool requests created by your SAP system from an easy-to-use intuitive PC interface and without any ABAP development!

Compleo Suite works with spool files directly in the SAP Spool System or Output Devices. The spool data can be exported in familiar PC formats such as Excel for further analysis or distributed in PDF format. The final documents can be enriched with data from external datasources and with graphical elements such as logos, barcodes, and watermarks.

Compleo Suite facilitates:

Printing Management. Easily manage your printers outside SAP.

Automatic formatting of reports in Excel. Save time reformatting your spool SAP data in Excel.

Automatic formatting of Business Documents. Improve the layout of your business documents without ABAP programming. Create professional looking outputs in a few clicks.

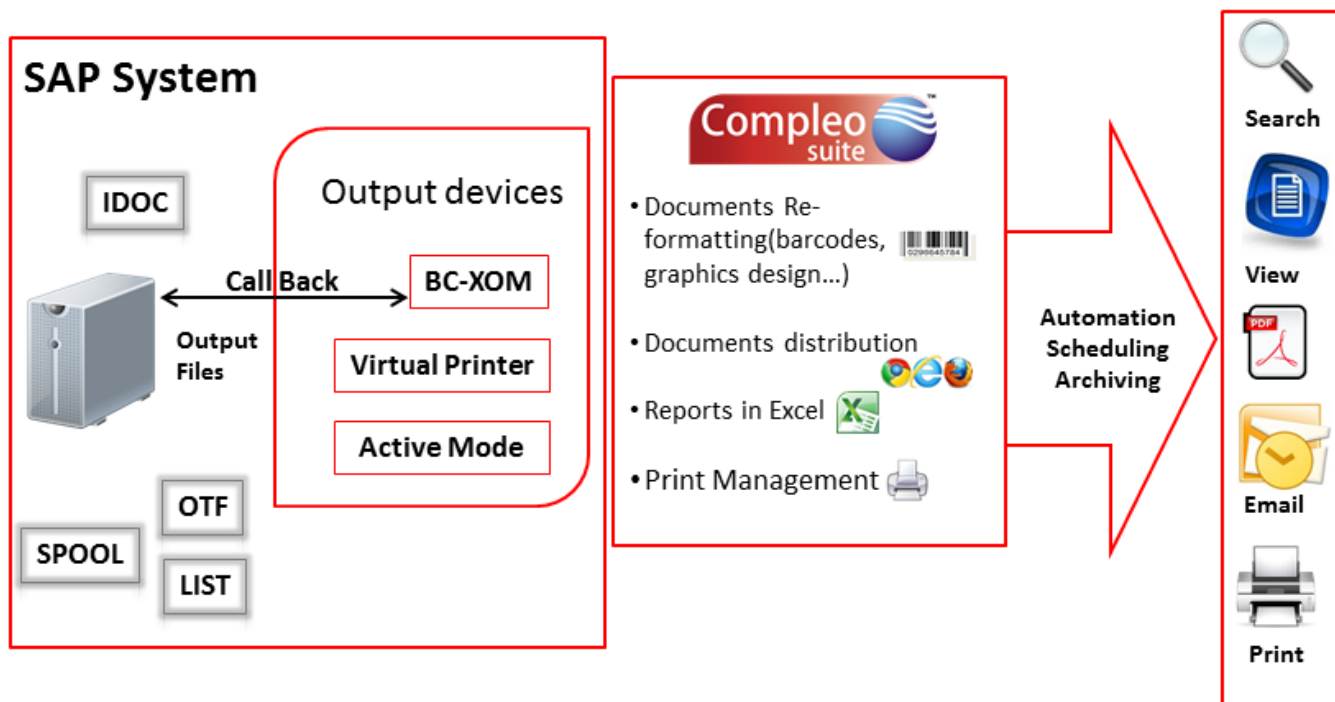

Export and Distribute the final document. Allow your spools to be available outside SAP.

SAP® Certified

Compleo Suite for SAP architecture

Advantages of the Symtrax SAP Spool Connectors

To give customers maximum flexibility, Symtrax provides 3 distinct methods to communicate with the SAP System. Each one can be implemented independent of the other, or they may be combined to achieve specific objectives such as quick implementation or reuse of existing output devices.

Main benefits and features:

	Benefits	Features
Active mode	<ul style="list-style-type: none"> - Secure & Efficient. - Browse through all the output devices. - No modification to the configuration of output devices. 	<ul style="list-style-type: none"> - Compatible with all the printing protocols.
BC-XOM	<ul style="list-style-type: none"> - Improves communication and allows feedback of the printing status in the SAP environment- - Allows viewing of all output devices from a single interface. 	<ul style="list-style-type: none"> - Uses of the BCXOM protocol recommended by SAP to the external OMS. - Call back communication
Virtual printer	<ul style="list-style-type: none"> - Easy to use and quick to implement. - Entralized management of virtual printers without notification in SAP. - Allows viewing of all output devices from a single interface. 	<ul style="list-style-type: none"> - Implemented by just setting up an Output device using device type: U
