

FOR IMMEDIATE RELEASE

Approve, Enhance, Distribute and Archive all your Documents with the New Major Release Compleo Suite 5

Los Angeles; Boston; London; Nîmes; Mumbai – January 16th, 2012 – Symtrax, an international software company today announced the release of Compleo Suite 5 a certified Output Management Solution that adapts to any business document need. It is a complete Suite to manage, develop, enhance, automatically distribute, sort and archive business documents.

Three major new capabilities have been added in this suite. Symtrax has developed a web based console interface to complement the current feature-rich client-server architecture. Additionally new functionalities have been added to Compleo Supervisor (backup & synchronization) and Compleo Layout (formatting).

Web console, gives your partners (customers, suppliers, etc.) the ability to insert their documents (purchase orders, invoices, etc.) into your organizations' document flow process. You can also create workflows and choose the actions to achieve. For example, approval using the new module Compleo Reviewer, and enrichment, distribution, or even archiving using Compleo Layout and Archivor.

In addition, with this release Compleo Suite has become an indispensable tool for "high availability" information technology architecture due to its new backup and synchronization features. With Compleo 5 should the production system stop, a new Compleo Supervisor takes over automatically through one of its backups, giving your company the security to know invoice billing and shipping documents will continue without interruption. And with the new synchronization function, the administrator can now easily manage two or more Supervisors that are automatically kept synchronized.

Finally, Compleo Layout now accepts new input formats (TXT and Spool fragments, in addition to PDF and spool) and a new barcode format (QR Codes) is available. You also have the ability to move spools archived on a Windows computer to an IBM System.

Compleo 5 is a comprehensive business document and output management suite that is characterized by its ease of use, power and quick implementation.
