

With StarQuery for Calc, Symtrax opens up to the free world and makes real time Business Intelligence possible in Open Office Calc.

Los Angeles; Boston; London; Nîmes; Mumbai - February 15th 2010

With the expanding user base of Open Source Software and specifically Open Office, a strategic decision was taken by Symtrax to enhance StarQuery Suite for Open Source spreadsheet software such as Open Office Calc. This new module for the Open Source world is named StarQuery for Calc. For companies who have chosen Open Calc; data mining and multidimensional analysis can be done directly in it through StarQuery for Calc's intuitive and powerful interface.

This solution enables users to create comprehensive data maps or business views of their databases and to benefit from multidimensional real time analysis directly in Open Calc, without having to buy any spreadsheet software licenses. Deployment and administration is facilitated by the Symtrax License Manager with complete integration in Open Calc through the tool bar.

With the powerful StarQuery for Calc, end users can create and update queries and reports in real time from Open Calc in order to have results automatically formatted as data pilots (pivot tables) or graphs thus helping managers make the right decisions.

This new module also allows JD Edwards users to visualize data in an understandable format (dates, decimals and labels), facilitating JDE ERP usage. In addition, for MS Excel users, migration to Open Calc is easy, without recreating the data maps or queries.

«With StarQuery for Calc, users can now work on, format and analyze their data directly in Open Calc with optimal security», underlines Bernard Aldebert, Managing Director of Symtrax. « It is also noteworthy that StarQuery Suite is the first Business Intelligence Suite covering nearly all spreadsheet programs users as StarQuery Suite is compatible with MS Excel and Open Calc. Symtrax is also unique because, even in the free world, our business model is based on licenses rather than services, thus keeping the cost under control».
