Consultancy Services

Optimize your investment with Symtrax services. Symtrax professional services bring the needed expertise to install, implement, use and manage Symtrax solutions. Thanks to their experience, Symtrax services offer a complete training set to answer your different needs in terms of competencies. This offer fits all professions and takes into account your teams' knowledge levels.

Why a Training?

A Training course is a decisive factor in the success of an application's implementation. This allows companies to get a better software use coefficient thus becoming a tremendous performance accelerator. That is why Symtrax offers to get the most out of your investment by training your teams to Symtrax solutions. Training courses are not mandatory but highly recommended for two reasons:

- A training course provides **administrators** a quick, reliable and secure implementation.
- A training course provides **users** complete autonomy, with an appropriate more easily client interface functionalities.

To promote a progressive knowledge acquisition, Symtrax training courses are structured on 2 levels:

- **Handling:** This training course is specifically destined to new users. This is the first introduction to Symtrax software, the attendee familiarizes quickly with the software through theoretic data based on real situations and exercises adapted to their professional environment.
- **Improvement:** This training course is made for experimented users, which is based on real client data.

SQ08	StarQuery for the Web – Implementation of a decisional Web platform	2 days

We can also help you estimate your needs in terms of training and customize our training courses in order to answer to your specific needs.

Onsite Training

Symtrax offers all its trainings onsite, in your premises. A minimum of 15 days delay and a maximum of 6 attendees per session are required. When a Symtrax consultant goes onsite, it is common for Symtrax to customize the training course, adapting the content and the course aid to the client's environment.

Hardware and software Installations

- Allow at least one PC for two attendees for a comfort monitoring.
- Install the later software version on the PCs.
- If you possess one, a video projector is recommended as of 2 attendees.

Hours

- The duration of one day of training is 7 hours.
- The hours can be adapted according to your request and the trainer arrival.

Live Web training

The attendees are trained on line via the GoToMeeting™ platform and get explanations on how to use the software, directly from the comfort of their own desk. A limited set of courses is available for live web trainings. This approach is perfectly suitable for companies whose users are in different places.

Why train via Internet for a professional training frame?

- Optimization of the learning time: no travel, no waiting, you are immediately operational.
- Training available via Internet: wherever you are, perfect if the attendees are dispersed on several sites.
- Accompaniment by an e-trainer: at your pace, according to your schedule.

Customize your training

The attendees will learn to use Symtrax software by visualizing and using their own professional data. This improves their learning and allows them to better understand how the Symtrax software can help them on a daily basis.

In case of cancellation

Symtrax does its best to respect the current schedule, but in the event of circumstances beyond its control needing to postpone a training course, Symtrax will not be held responsible for any penalties related to transport costs that could occur due to a cancellation or a date change. However, the date change notice, or cancellation, is made if possible seven days before the training date.

In the case where the client asks a cancellation or a postponement to a later date:

- If the company decides to cancel the training, cancellations made 15 working days or more before the first training date will not be charged.
- If the training course is cancelled within the 15 working days period before the first training date, cancellation fees will be charged (maximum 50% of the session price, except in the case where the training is postponed to a later date).
- In the case of a training session cancelled without notice, the whole session(s) will be charged.

Complementary information

SYMTRAX is an approved training organization, so the offered trainings are eligible to companies' training budgets and are chargeable to the funds destined to legal training obligations, so you can choose to:

- Pay the training without reimbursement.
- Pay the training directly and be refunded by your Mutual Agency Association (case built by your company).
- Charge directly your Mutual Agency Association for the training.

The trainings can be carried out on site, through the Web and in our premises.

How to ensure a quick and efficient implementation of your publishing management solution?

Situation

You are interested in a training course on Compleo Suite software.

Objective

The success of a Management Output project goes by the ability of employees to appropriate quickly the new tools and to integrate them in their professional environment. To take complete advantage of Compleo Suite tool in your environment and thus optimize your printing system and/or ERP outputs, we offer you to carry on a transfer skills action.

CS01 - Title: Compleo Suite, new functionalities
