

For Immediate Release

Symtrax Corporation Announces Compleo For XML, An Addition to the Compleo Suite. Compleo for XML, A Solution to Generate Structured XML Documents from an I-series and ERP's including SAP, JDE and others.

Boston, MA., January 26, 2009 - Symtrax Corp. Today announced the US release of Compleo for XML, a solution focused on the generation of XML documents directly from your current ERP Solution. The product compliments the Compleo Suite by giving users the ability to convert spool file data into structured XML documents.

The exchange of business critical information between organizations and business applications is a key factor impacting process automation and administrative costs associated with processing invoices, purchase orders, delivery notes, and more. XML format is the industry standard for business form interchange, yet most ERP's are not able to generate XML.

Symtrax launched, Compleo for XML as the first reporting solution to provide users the ability to convert unstructured I-series and ERP spool files into structured XML format; enabling Electronic Data Interchange within their infrastructures. Total integration with current IT environments makes Compleo for XML a flexible solution to create XML documents from ERP outputs.

Symtrax's policy is to encourage green IT and environmentally friendly business initiatives. Compleo for XML further demonstrates our stride towards a cleaner world, by giving organizations the ability to reduce paper waste, conserve natural resources, and send less industrial waste into landfills. By using Compleo for XML organizations have cut paper, ink, and toner usage by up to 50%.

"Compleo For XML enhances our Output Management Solution portfolio, Compleo Suite, by offering a complete and intuitive data exchange module. This solution improves the effectiveness and security of communication between our customers and their partners by allowing the generation of XML documents without modifying the existing applications" emphasizes, Bernard Aldebert, CEO of Symtrax. He further explains, "The launching of this new solution lays down the importance of XML format as output of Iseries and ERP's (SAP, JDE) in the electronic data interchange market."
